

# New Receiver System for 21cm Global Spectrum Field Experiment

Shenzhe Xu  
2024.7.24

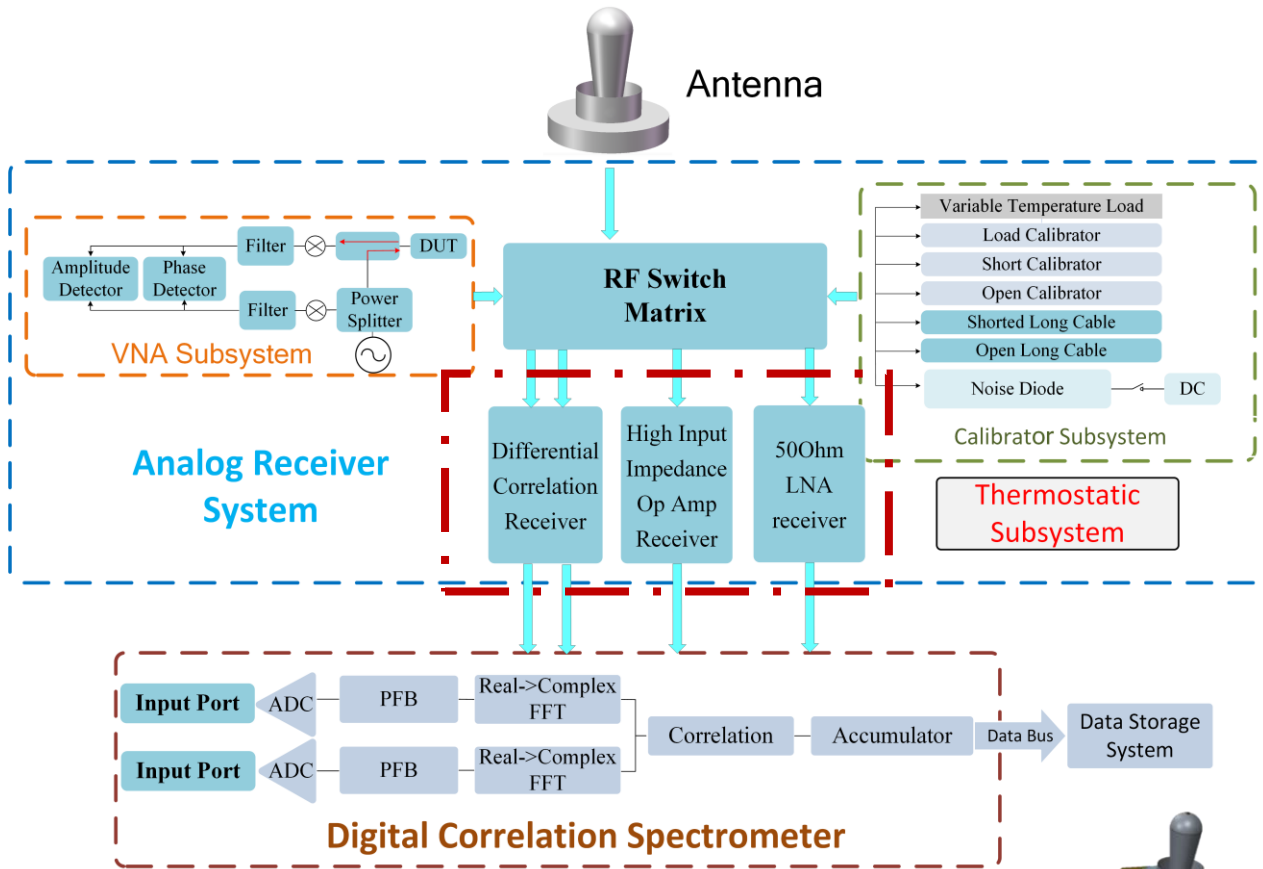

中国科学院国家天文台  
NATIONAL ASTRONOMICAL OBSERVATORIES, CAS

# Introduction

---

System design of global spectrum satellite

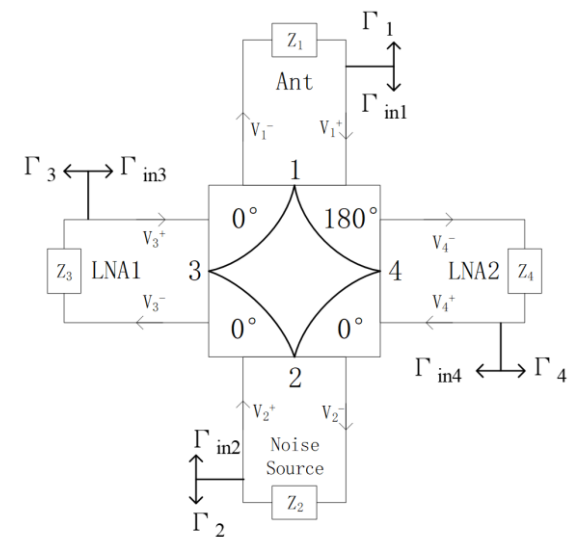

## One-way matched LNA receiver

## High input impedance receiver

## Two-way differential receiver

# Elliptical Cylinder Dipole Antenna

As a verification of the satellite system

# Elliptical Cylinder Dipole Antenna

Optimized to perfectly work in free space

Balun: Difficult to Calibrate

Receiver under the ground

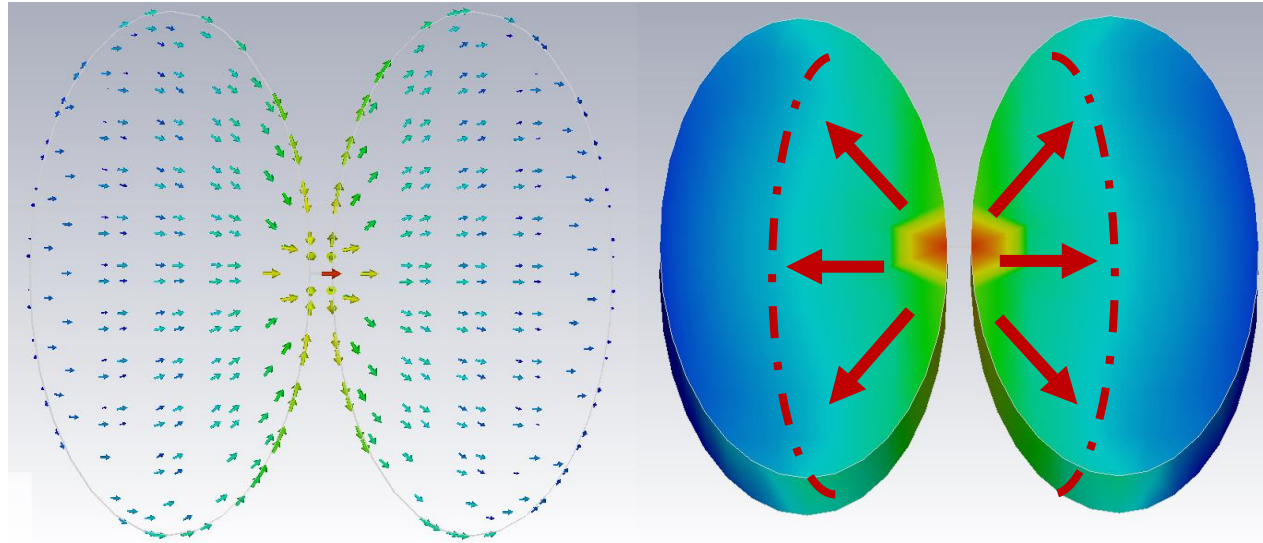

## Ground Effect

- Ground net
- Surface of a lake

- **Impedance match** between the Antenna and Receiver
- **Frequency-independent** Beam Pattern

# Elliptical Cylinder Dipole Antenna

The surface current tends to be an elliptic radiant

- |         |   |         |
|---------|---|---------|
| Outside | → | Inside  |
| Plane   | → | Solid   |
| Hexagon | → | Ellipse |

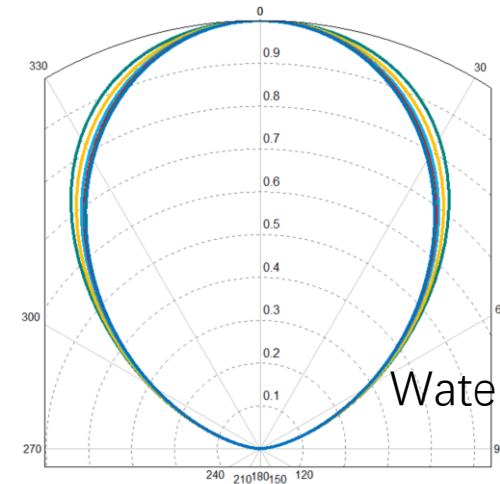

A short coaxial line connecting Feed and Receiver

# Elliptical Cylinder Dipole Antenna

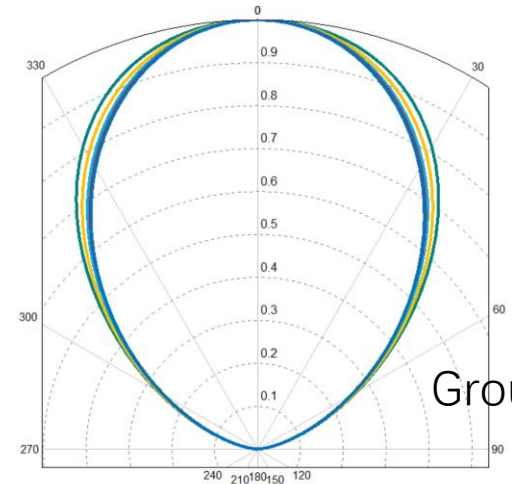

— Frequency = 50 MHz — Frequency = 60 MHz — Frequency = 70 MHz  
 — Frequency = 80 MHz — Frequency = 90 MHz — Frequency = 100 MHz

Water Surface

— Frequency = 50 MHz — Frequency = 60 MHz — Frequency = 70 MHz  
 — Frequency = 80 MHz — Frequency = 90 MHz — Frequency = 100 MHz

Ground Net

Band Width(S11<-10dB):**56Mhz-143Mhz**

HPBW\_max – HPBW\_min < **1.8°**

a	Aspect ratio
r	Radius of minor axis
s	Distance between two antenna
z	Thickness of antenna
h	Height from ground

Get a well matched model of almost triple octave bandwidth with an achromatic beam pattern

# Elliptical Cylinder Dipole Antenna

## Folded Arm

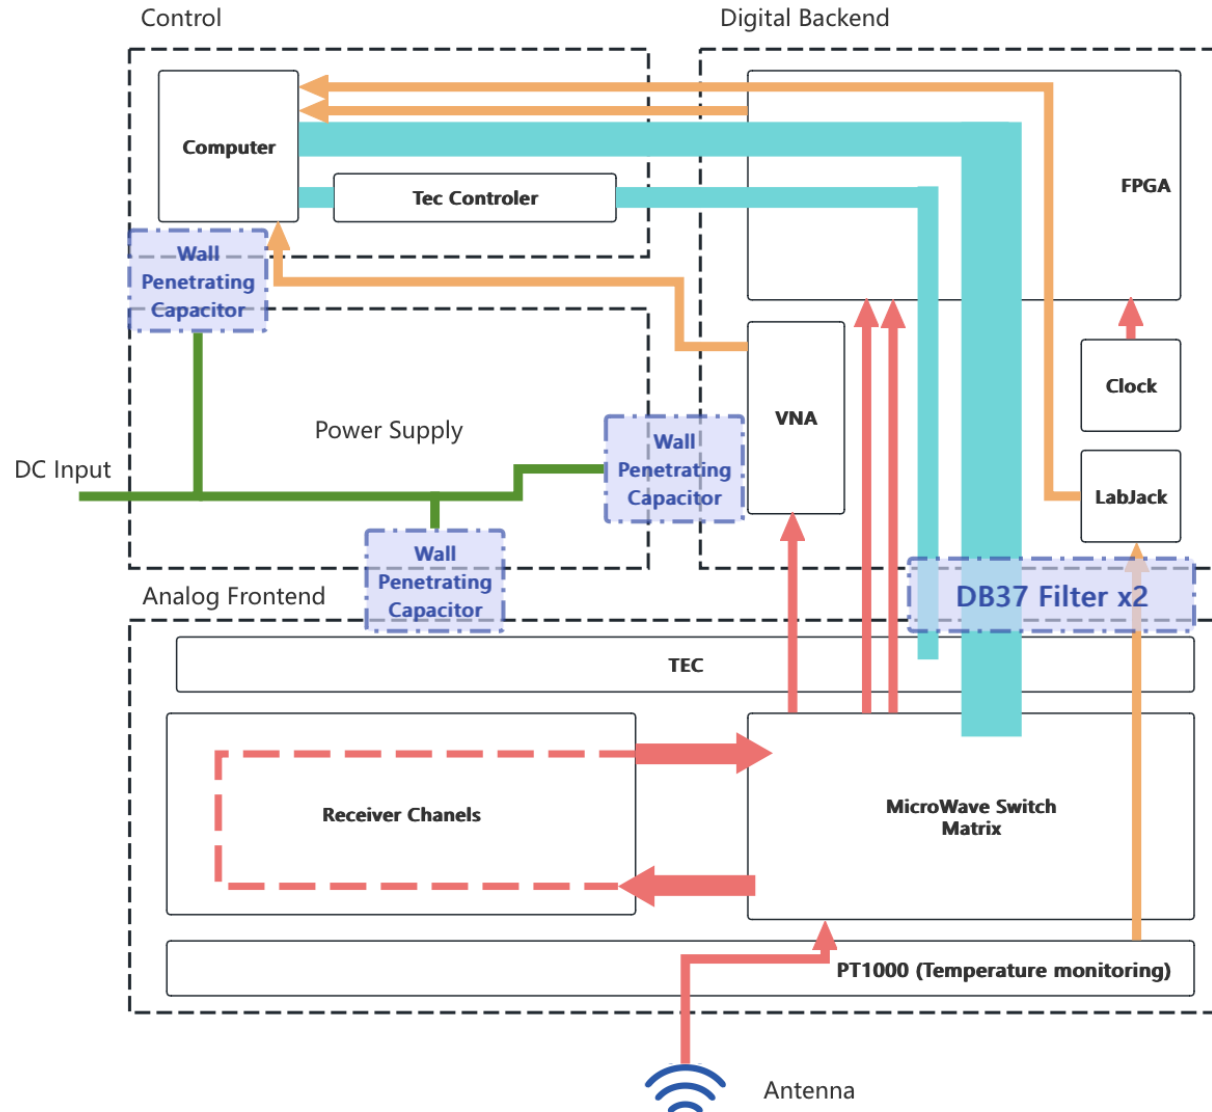

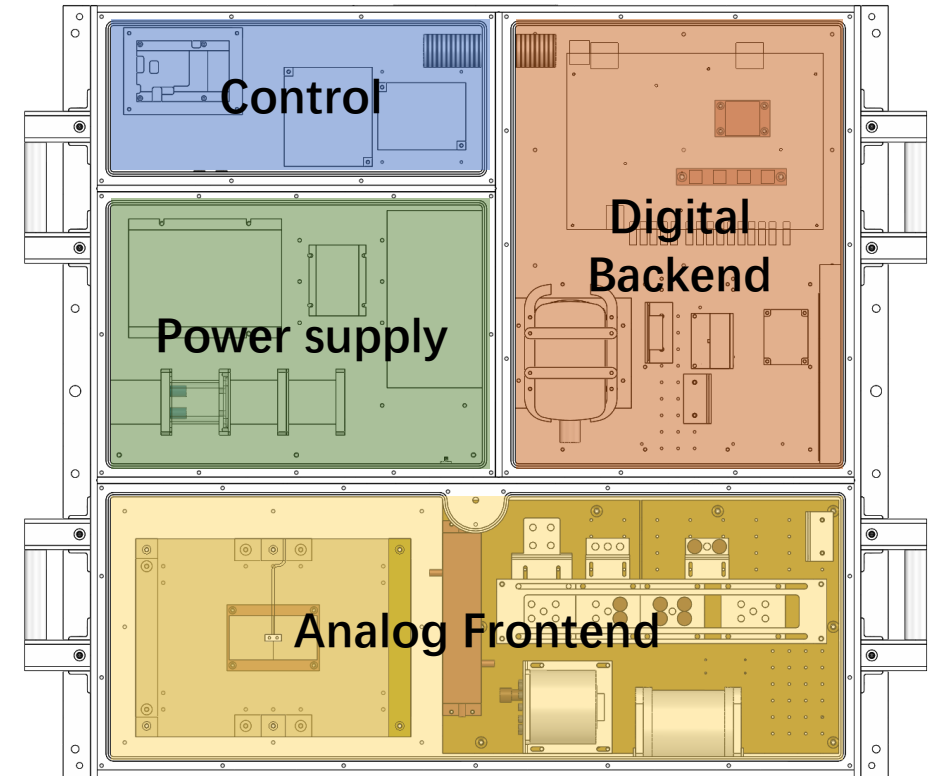

# Multi-Receiver

# Multi-Receiver

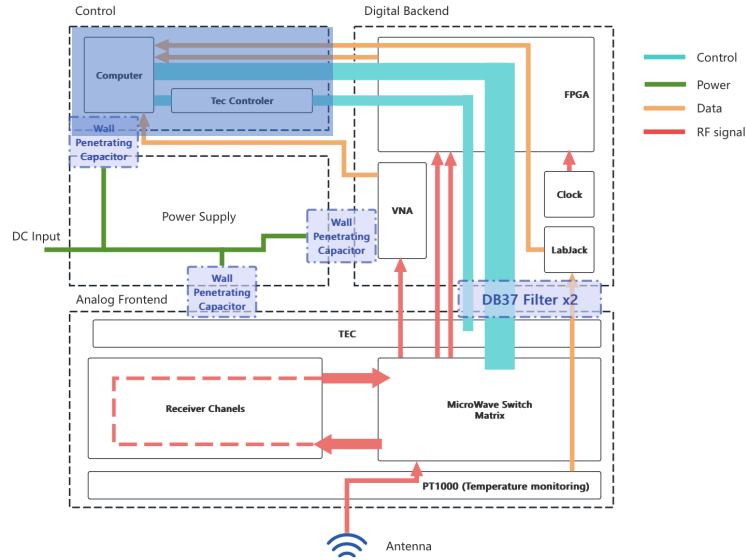

- Control
- Power
- Data
- RF sig

# Multi-Receiver

## Tec-Controller

- Keep constant temperature

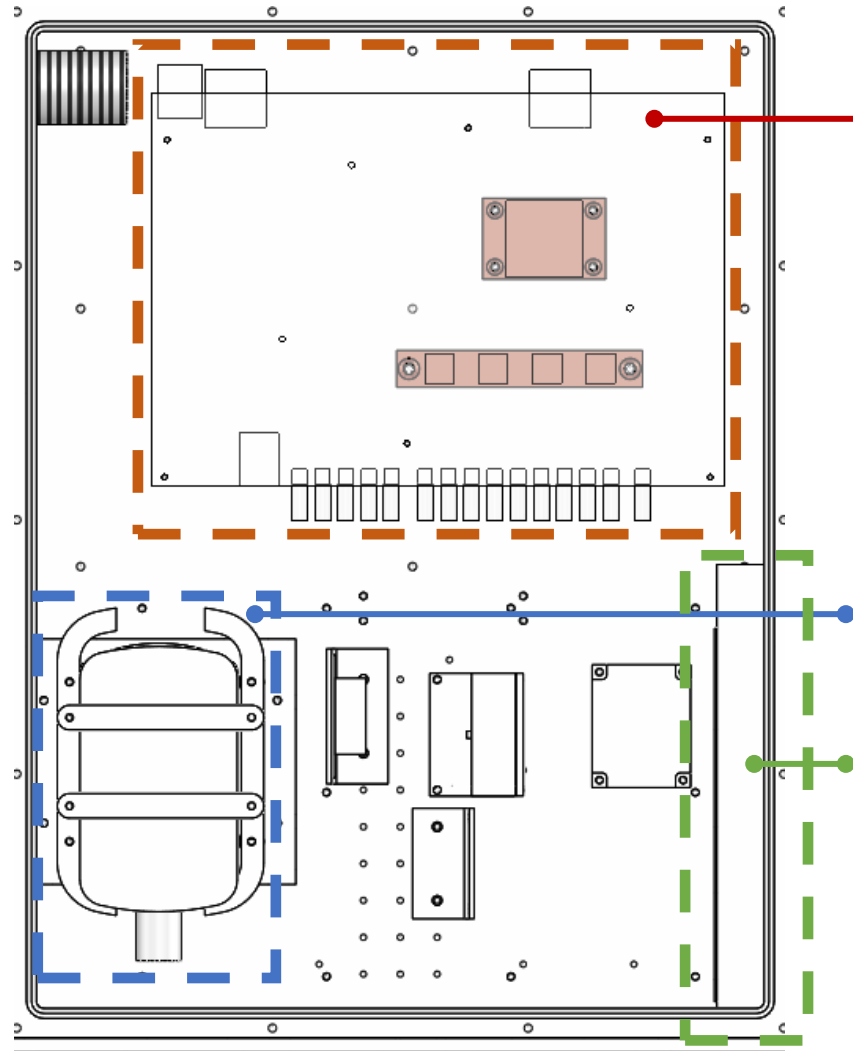

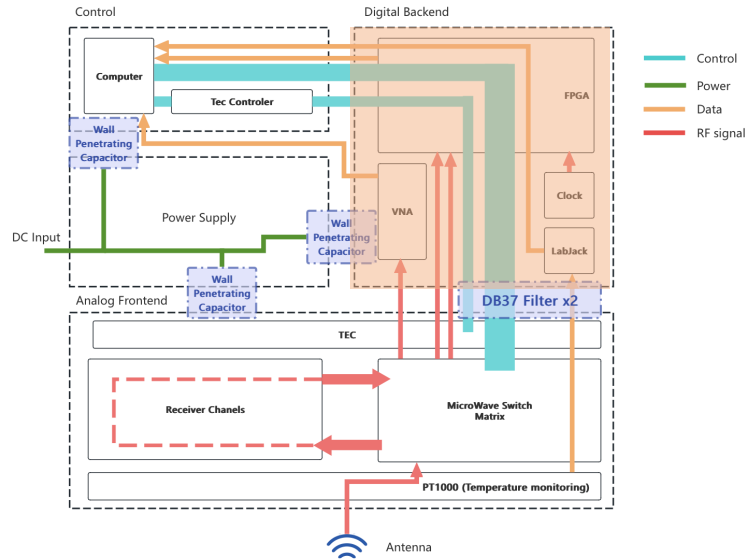

## UpBoard-Nezha

- Control
- Data storage

# Multi-Receiver

## FPGA correlation board

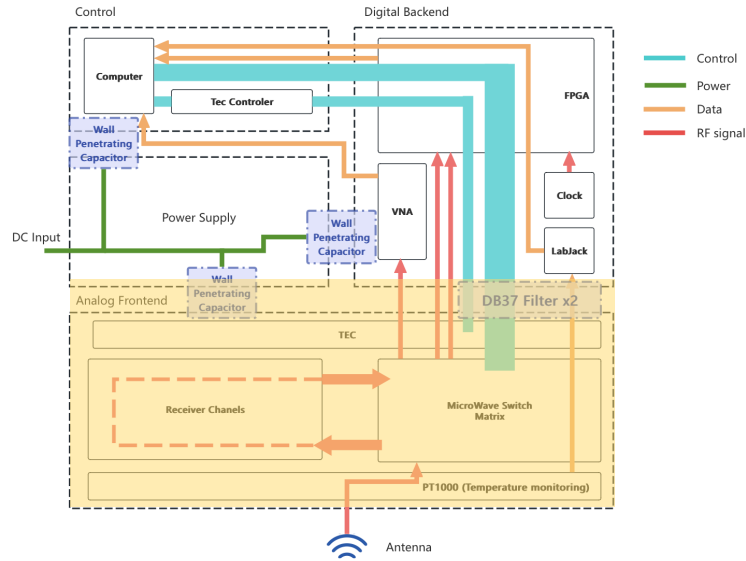

- 12-bits ADCs
- 500 million samples per second

## Vector Network Analyzer

## Temp Data collecting module

# Multi-Receiver

## Analog Receiver units

- Three 50Ohm LNAs
- One high input impedance Amplifier
- Two Noise Sources

## Hot Load

## Microwave switch Matrix

## Temperature Control and Monitor module

# Multi-Receiver

Prototype of 50Ohm LNA  
(65dB,30-200MHz)

- Three 50Ohm LNAs
- One high input impedance Amplifier
- Two Noise Sources

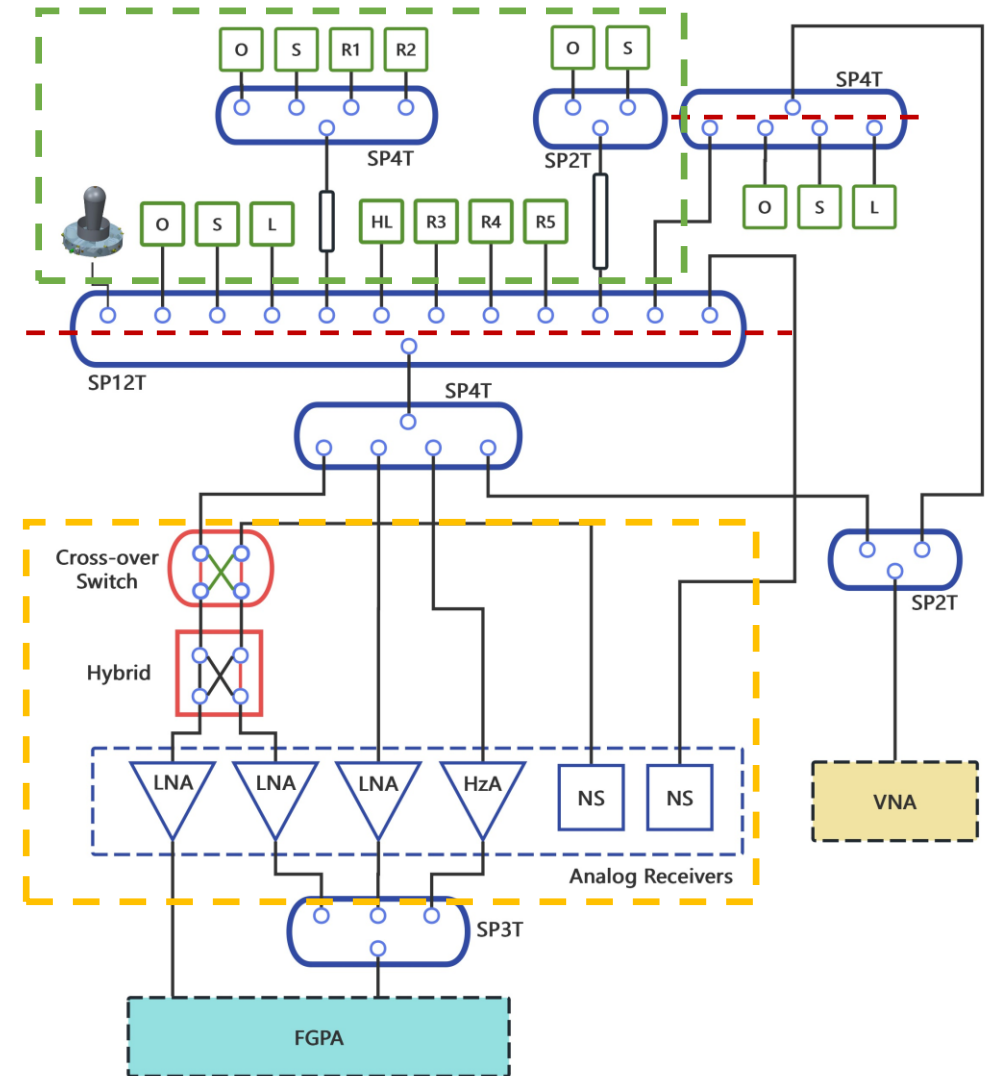

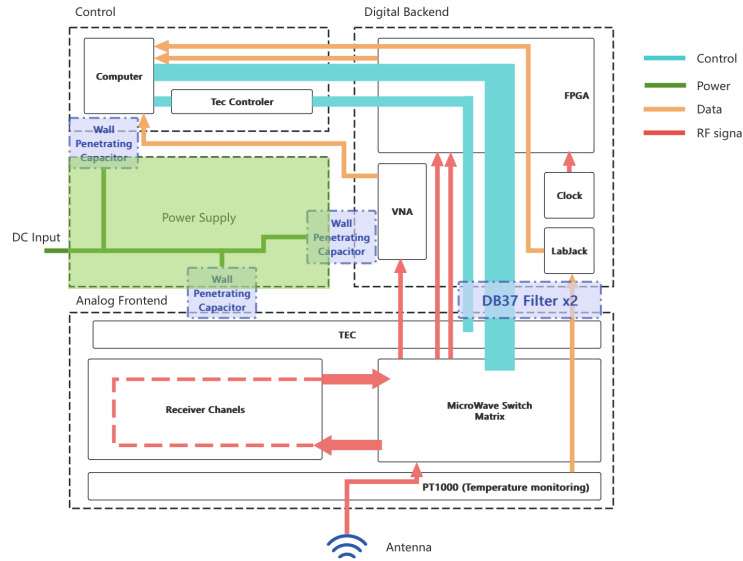

Diagram of Signal Chain

# Multi-Receiver

## DC-DC/DC-AC Converter

- If using solar power

External Power Supply →

RFI shielding cavities

mechanical structures

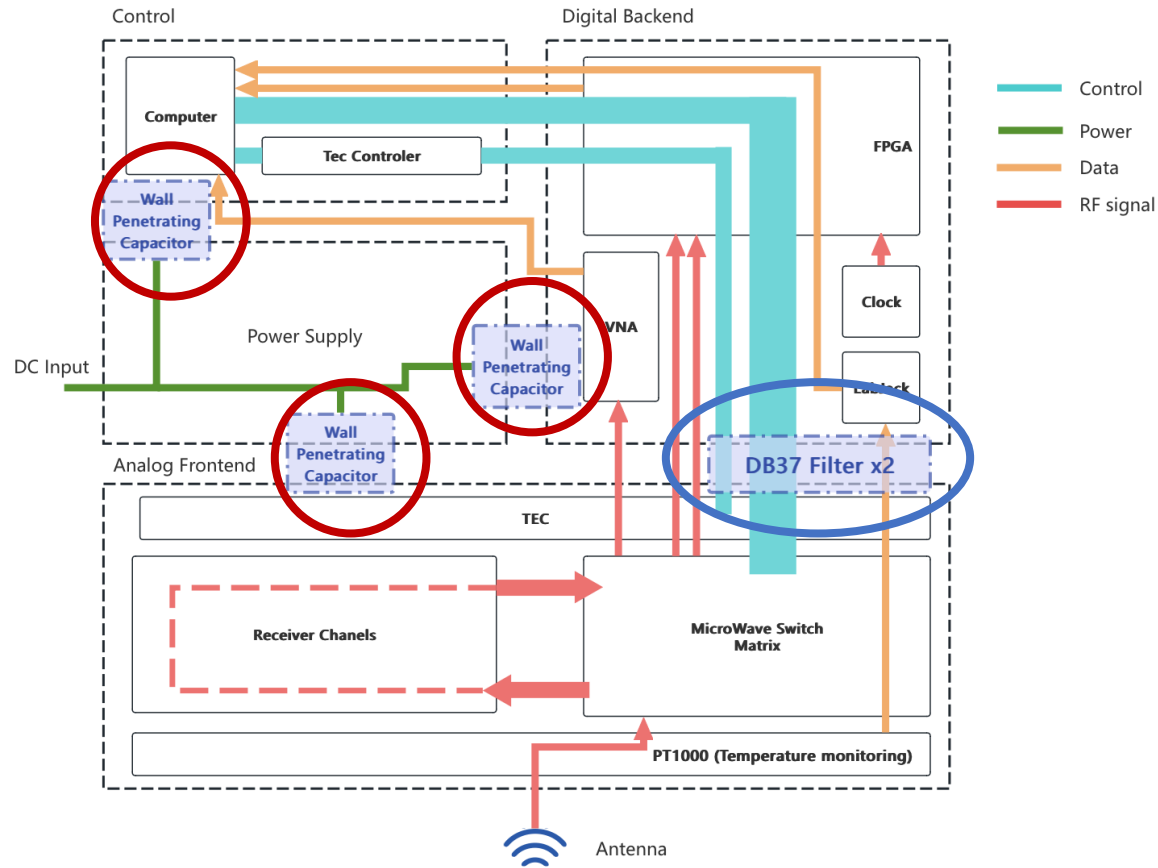

- Isolation 160dB totally

Wall-penetrating Capacitors

# Multi-Receiver

## DB37 Filters

## Wall-Penetrating Capacitors

Isolation of a single Capacitor

# Multi-Receiver

## Freq below 200Mhz

## Freq above 200Mhz

# Overall System

# Overall System

Antarctica

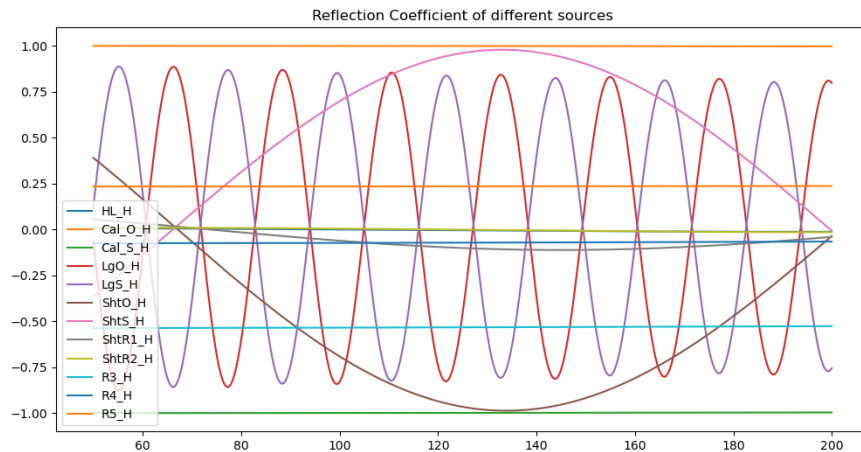

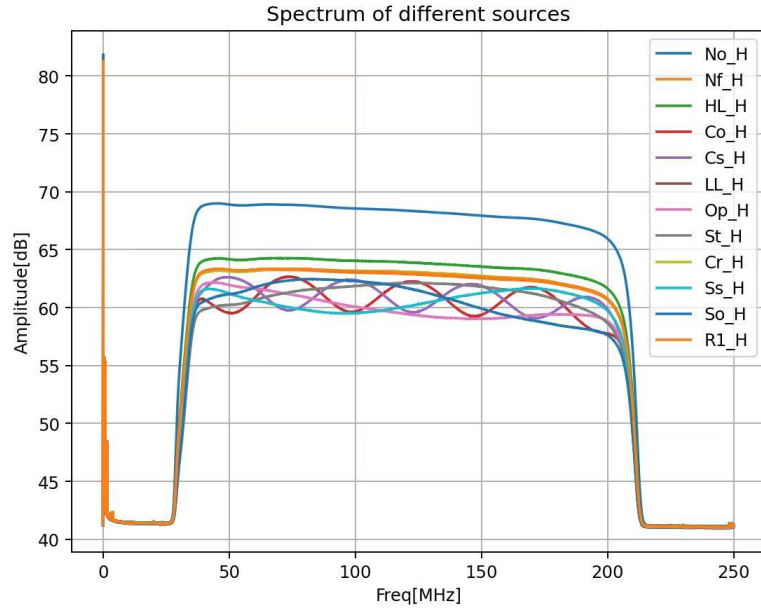

Hongliuxia,  
Xinjiang, P.R.C.

# Preliminary Calibration Results

Recovered Temp (Integrated 14hour data)

# Preliminary Calibration Results

---

## Conclusion:

1. A verification platform for the inside-antenna-multi receiver system.
2. Receiver with great EMC performance.
3. The overall system is under test.
4. Preparing for the water surface/ice surface/ground net experiment.
